

CUSTOM MOULD DEVELOPMENT

Need a Diaphragm That Is Not in Our Catalogue?

DIAFEX has its own mould-making capability. Every diaphragm model listed in our product programme is supported by a dedicated mould produced within our own mould-making facilities.

From New Requirement to Dedicated Mould

When a customer requires a hydraulic breaker diaphragm that is not currently included in the DIAFEX catalogue, our manufacturing capability allows us to develop a new dedicated mould and supply the required diaphragm without depending on an external subcontract mould manufacturer.

01 · REQUIREMENT

Application Request

The customer sends the required breaker application and available product information.

02 · REVIEW

Technical Evaluation

DIAFEX reviews the requirement and the information needed for mould development.

03 · DEVELOPMENT

Dedicated Mould

A new dedicated mould can be developed within our own mould-making facilities.

04 · PRODUCTION

Diaphragm Supply

Following mould development, the requested diaphragm can be manufactured within the DIAFEX production system.

Expanding application coverage: Our in-house mould-making capability enables DIAFEX to respond to diaphragm requirements beyond the models already listed in our catalogue and to expand our product programme according to customer demand.

Send us the application details and available product information for evaluation.
